Identity & Verification

Verify client identities and retain records with confidence

A changing regulatory landscape

From 1 July 2026, Australia’s AML/CTF regime expands under tranche 2, applying to certain services commonly provided by accountants, lawyers, trust and company service providers, and other professionals.

NowInfinity’s Identity and Verification (ID&V) solution is a digital identity checking tool available in the NowInfinity platform, designed to support businesses preparing for these changes.

Choose the right level of verification

Standard

This identity verification option enables users to confirm identity by cross-checking against government-issued identification sources. Biometric verification is available.

Enhanced

Go beyond the Standard identity verification option with watchlist screening against Politically Exposed Persons (PEPs) and Sanction lists (global lists of individuals subject to additional scrutiny). Biometric verification is available.

Enhanced + ongoing monitoring

In addition to the Enhanced option, this option offers ongoing watchlist monitoring for Politically Exposed Persons (PEPs) and Sanction lists for 12 months. You may renew this service by opting in when you receive our communications. Biometric verification is available.
